AI Work Control Review

WORK IDENTITY

- Workflow / use case: _____
- Process owner: _____ Primary user: _____
- Selected capability path: _____
- Approved operating mode: _____
- Consequence if wrong: _____

SIX CONTROL CLAUSES

- 1 - Business intent** Completed outcome, baseline, accountable owner, scope, consequence, and non-goals.
- 2 - Approved context** Systems of record, source authority, lineage, access, freshness, classification, and conflict behavior.
- 3 - Tool authority** Identity inheritance, least privilege, allowlists, limits, reversibility, and escalation.
- 4 - Evaluation evidence** Representative cases, expected behavior, failure classes, refusal, injection, permissions, fallback, and regression.
- 5 - Human decision** Named approval, exception, override, accountability, stop, and recovery authority.
- 6 - Operating record** Outcomes, corrections, failures, access events, cost, adoption, support, incidents, and change ownership.

EVALUATION RECORD

- Completed business outcome: _____
- Groundedness / factual support: _____
- Source authority / lineage: _____
- Completeness / required fields: _____
- Refusal / no-answer behavior: _____
- Injection and data boundary: _____
- Tool action and permissions: _____
- Human review / override / recovery: _____
- Adoption / user behavior: _____
- Economics / review burden: _____

DISPOSITION

- ADVANCE / REPAIR / HOLD / STOP
- Decision rationale: _____
- Required repair or condition: _____
- Decision owner(s): _____
- Next evidence posture: _____
- Reusable pattern candidate: _____
- Change / retirement owner: _____

REVIEW QUESTION

- Can another team understand why this capability path was selected, the intended outcome, authoritative context, tool authority, evidence, human decision, approved operating mode, economics, and ownership without relying on the original prompt author?
