Enterprise Engineer Sr - AI - Cover Letter

AUGUST 2026 - AMY CRISANTI - PNC - REQUISITION 71280

Dear Ms. Crisanti, Our conversation clarified that PNC's enterprise AI challenge is not a shortage of ideas. It is turning a backlog across Enterprise Change, shared-services finance, supply chain and procurement, and realty into a governed portfolio of work-within approved tools, complex integrations, strict data-loss boundaries, and accountable decision rights.

Relevant experience. At Vape-Jet, I operate across support, engineering issue flow, production, quality, Odoo, Jira, HubSpot, Slack, telemetry, and AI-assisted workflows. Through DudeWorth, I design patterns connecting structured context, retrieval, human judgment, escalation, evaluation, governance, and reuse. Amazon and Compunetics supplied the operating discipline behind that work.

Operating approach. I would first make the portfolio decision system visible-demand, systems of record, data lineage, approved capabilities, ownership, risk, economics, and capacity. Then I would select bounded proofs and use the safest approved evidence posture without forcing the organization past its control boundary.

Candidate work. The candidate vision, revised 90-day plan, live Linear operating board, and AI Work Control Review show how I listen, update a hypothesis, translate ambiguity into a working system, and preserve evidence boundaries.

Next conversation. I would welcome the opportunity to discuss where the portfolio is most ready, how the new team should divide ownership and reusable-pattern stewardship, and what evidence PNC requires before a workflow earns a higher operating posture.

Respectfully, Russell Dudek
